

## Understanding mosquito control

Your pest management professional has a two-pronged approach for controlling mosquito populations in your yard:

### larvicides

Designed to prevent larvae from developing into breeding, biting adult mosquitoes. Generally applied in mosquito breeding sites – typically in areas with standing water.

### adulticides

Provide immediate relief by killing adult mosquitoes. Used in “perimeter” or “barrier” treatments, this involves spraying the adulticide around the outside of buildings, in yards and grassy areas, and on ornamental plants. This method not only kills adult mosquitoes, it also prevents them from migrating from untreated areas into spaces where you and your family spend time outside.

SWARM

**WHY IT MATTERS:** Mosquitoes are not only irritating, but they are also a vector organism that transmits diseases such as West Nile virus, Zika virus, Dengue and Chikungunya that can threaten the health and welfare of your family and pets. Your pest management professional has the capability to treat for mosquitoes with products that complement the community control efforts of Mosquito Abatement Districts (MADs) and Public Health Officials (PHOs).

# The key to controlling mosquitoes is eliminating breeding areas...

# What can you do?

In addition to calling your pest management professional to treat your property with professional products, there are also some important steps you can take to help protect yourself and your family from mosquitoes and the diseases they carry.

Mosquitoes breed and lay their eggs in standing water, so dispose of old tires, buckets, planters and other containers in your yard that may collect water.

Empty standing water from all containers on your property, including birdbaths and pet water bowls, at least once a week.

Fill in tree rot holes and hollow stumps that hold water.

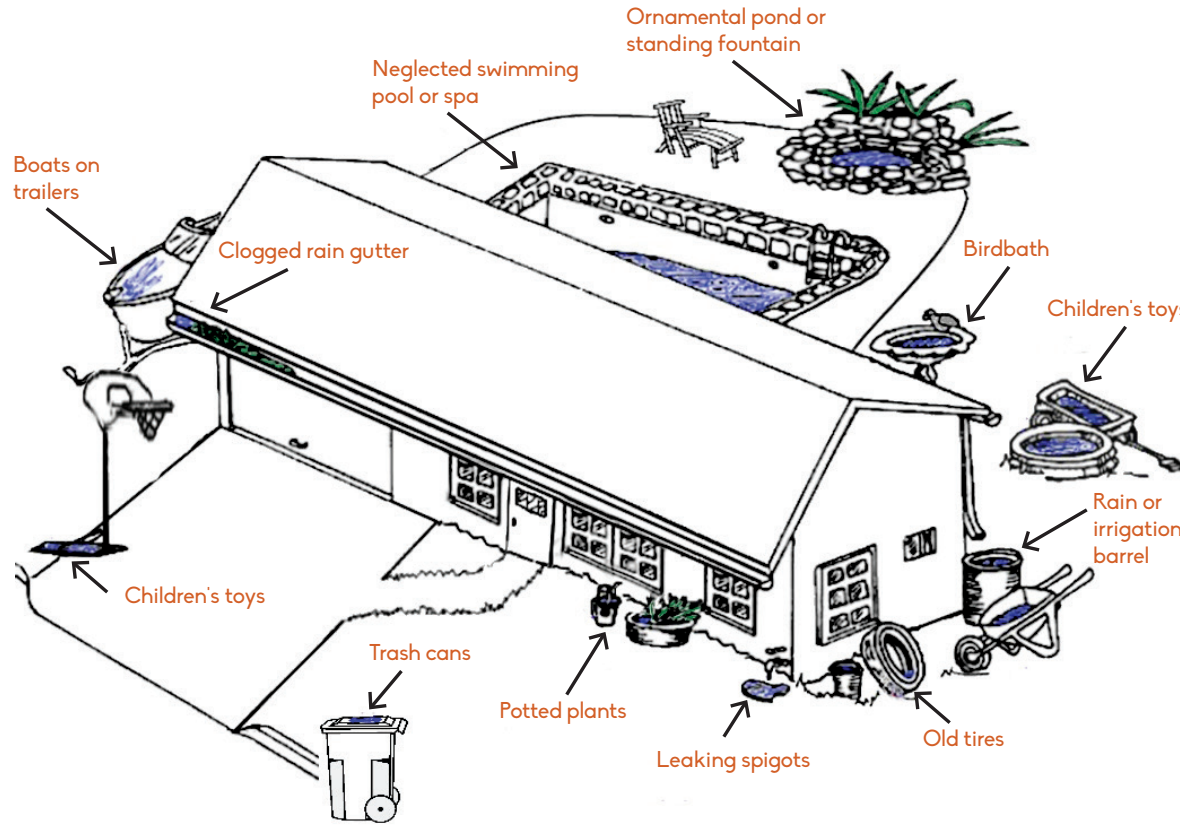

Clean clogged roof gutters.

Drill holes into the bottom of tire swings.

Make sure all windows in your home have screens in place; repair any holes or tears in screens.

## PROFESSIONAL MOSQUITO CONTROL: PRODUCT GUIDE

Your pest management professional carries a variety of EPA-registered products that are approved to treat your yard.

### Mavrik® Perimeter

This adulticide product is designed to be used on the surface of buildings as a perimeter treatment. When dried, it is non-toxic to honeybees while still providing you relief from biting adult mosquitoes.

### Lambda 9.7 CS

Specifically formulated to not break down in the heat, Lambda 9.7 CS provides perimeter control of adult mosquitoes around your yard.

### Altosid® Pro-G and 30-Day Briquets

Two variations of a similar larvicide product, both formulated with an Insect Growth Regulator (IGR) to prevent mosquitoes from breeding and multiplying in your yard. Generally applied in areas where there is standing water, both products provide mosquito larvae control for up to 30 days.
